-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 13-16 and 24 are rejected under 35 U.S.C. 103(a) as being unpatentable over Igarashi in view of Osakabe.

Igarashi teaches all of the limitations of Claim 13 except the exact location of the pressure sensor and the vibration isolating means for the pressure sensor. Osakabe teaches isolating a pressure sensor from the engine vibrations using a dampening material. The sensor is located between the pump and the pressure regulator.

It would have been obvious to use a vibration isolator on the sensor of Igarashi because Osakabe had taught the need to isolate pressure sensors from engine vibrations.

Claim 28 is rejected under 35 U.S.C. 103(a) as being unpatentable over Igarashi and Osakabe as applied to Claim 13 above, and further in view of Rhine.

Rhine applies as noted in the rejection of 4/19/04 and for the reasons noted therein.

Claims 17-23 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

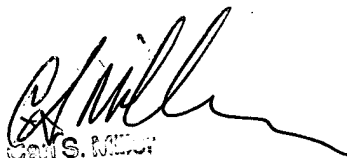

Due to the application of newly discovered art against the Claims this action has been made non-final.
